ABOUT

I am a computer engineering graduate with work experience in AI, mobile and web application development. I built Flutter-based mobile applications and ASP.NET MVC web systems used in real business workflows. Additionally, I trained real-time computer vision models and fine-tuned LLMs. I worked across frontend, backend, and database layers, including API integrations and production codebases. I'm interested in junior software engineering roles involving full-stack development.

EXPERIENCE

Software Developer Intern, SA Yazilim

02/2025 – 06/2025

- Developed Flutter-based mobile applications for courier and restaurant management systems
- Built admin panels with real-time tracking, CRUD operations, and map-based interfaces
- Implemented backend features using ASP.NET MVC and C#, including REST APIs and authentication logic
- Integrated third-party services such as Trendyol APIs and Google Cloud Vision (OCR)
- Worked with SQL Server databases, handling complex queries, soft deletes, and performance-sensitive operations
- Collaborated with senior developers on a large legacy codebase with limited documentation

Independent Contractor, Outlier.AI

07/2024 – Present

- Evaluated and rated AI-generated outputs based on correctness, consistency, and quality guidelines
- Reviewed prompt-response pairs and ranked model completions in a production-oriented workflow across various topics
- Followed strict annotation standards in a fast-paced remote environment

Computer Vision Intern, AF/AC Bilisim

06/2024 – 09/2024

- Developed an AI-based fire and smoke detection system using Python and OpenCV
 - Built image processing pipelines and reduced false positives through dataset refinement
 - Collaborated with senior engineers to integrate detection logic into the system architecture
-

EDUCATION

Bachelor of Science in Computer Engineering - (09/2021 - 08/2025)

Abdullah Gül University - CGPA: 3.19/4.00

PROJECTS

Portfolio Website - [Test.TalhaKarakoyunlu.com](https://test.talha.karakoyunlu.com)

- Developed a modern, bilingual application using React, TypeScript, and Tailwind CSS
- Architected a secure, serverless AWS infrastructure (S3, CloudFront, Route 53) with an automated CI/CD pipeline via GitHub Actions and OIDC

[Fire & Smoke Detection System](#)

- Developed a real-time fire & smoke detection system using Python, OpenCV, and YOLOv8
- Optimized model training under strict VRAM limits, achieving ~90% confidence
- Integrated an automated alert mechanism to send immediate email notifications with captured frames

[Qwen2.5 Customer Support Chatbot](#)

- Fine-tuned the Qwen2.5 language model using LoRA and PyTorch to act as a specialized customer support assistant
- Optimized training for consumer-grade hardware using 4-bit quantization and deployed a Gradio UI for testing

[Musing](#)

- Built a music browsing and playlist management web app with my friends using Spotify API
 - Implemented dynamic rendering with EJS, JavaScript, and CSS
-

TECHNICAL SKILLS

Programming Languages

- Python, Java, Dart, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks & Platforms

- Flutter, ASP.NET MVC, Entity Framework, REST APIs, SQL Server, Firebase

Tools

- Git, VS, VS Code, Postman, SSMS, MySQL, Android Studio

Languages

- Turkish (Native), English (C1)
